| HE200MJ2TRM | Adapter, RJ45 (8P8C) male to 8- position terminal strip. | |
| HE-FBD001 | Ferrite core for filtering out electrical noise. | |

Backup Battery

The Canvas 4 uses a Renata CR2032 lithium battery to run the Real Time Clock. The battery life is 7-10 years.

For more information, see MAN1364.

Connectivity

| Serial Ports | 1 RS-232 and 1 RS-485 on singular Modular Jack |
|-----------------------|--|
| USB mini-B | USB 2.0 (480Mbps) Programming & Data Access |
| USB A (500mA max) | USB 2.0 (480Mbps) for USB flash drives (2TB) |
| CAN Port Isolated 1kV | Remote I/O, Peer-to-peer Comms, Cscape |
| CAN Protocols | CsCAN, CANopen, DeviceNet, J1939 |
| Ethernet | 10/100 Mb (Auto-MDX) |
| Ethernet Protocols | TCP/IP, Modbus TCP, FTP, SMTP, EGD, ICMP, ASCII |
| Remote I/O | OCS-I/O |
| Removable Memory | microSD, SDHC, SDXC (in FAT32 format), support for 32GB maximum. Application Updates, Datalogging |

USB Webcams

USB Webcams supported should support the UVC (USB Video class) protocol for the OCS to be able to display video. Most USB based video devices support this today. Special feature such as zoom and high definition are not supported by the OCS.

Power Wiring

NOTE: The Primary Power Range is 10VDC to 30VDC.

| Primary Power Port Pins | | |
|-------------------------|--------|----------------------------|
| PIN Signal Description | | Description |
| 1 | Ground | Frame Ground |
| 2 | DC- | Input Power Supply Ground |
| 3 | DC+ | Input Power Supply Voltage |

DC Input/Frame

- Solid/Stranded Wire: 12-24 AWG (2.5-0.2mm²)
- Strip length: 0.28" (7mm)
- Torque, Terminal Hold-Down Screws: 4.5 7 in lbs (0.50 0.78 N m)
- DC- is internally connected to I/O V-, but is isolated from CAN V-. A Class 2 power supply must be used.

Power UP

1. **OPTION**: Attach ferrite core with a minimum of two turns of the DC+ and DC- signals from the DC supply that is powering the controllers.

- 2. Connect to earth ground.
- 3. Apply recommended power.

WIRING: INPUTS AND OUTPUTS

Analog Inputs Information

Raw input values for channels 1-4 are found in the registers as Integer- type data with a range from 0 – 32000. Analog inputs may be filtered digitally with the Filter Constant found in the Cscape Hardware Configuration for Analog Inputs. Valid filter values are 0-7 and act according to the following chart:

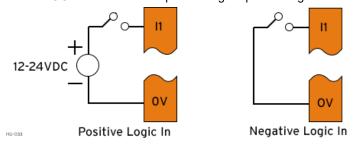

| Data Values | | |
|----------------|--------------------------|--|
| Input Mode: | Data Format, 12-bit INT: | |
| 0-20mA, 4-20mA | 0-32000 | |
| 0-10V | 0-32000 | |

Digital Inputs

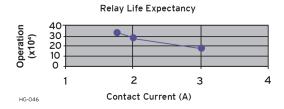

Positive Logic vs. Negative Logic

The OCS can be wired for positive logic inputs or negative

Digital inputs may be wired in either a Positive Logic or Negative Logic fashion as shown. The setting in the Cscape Hardware Configuration for the Digital Inputs must match the wiring used in order for the correct input states to be registered. When used as a normal input and not for high speed functions, the state of the input is reflected in registers %I1 – %I12.

Relay Life

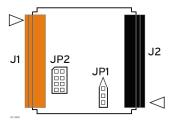

WARNING: Exposure to some chemicals may degrade the sealing proper-ties of materials used in the Tyco relay PCJ.

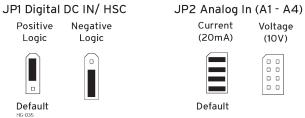

Cover/Case & Base: Mistubishi engineering Plastics Corp. 5010GN6-30 or 5010GN6-30 M8 (PBT)

Wiring Details

Solid/Stranded Wire: 12-24 AWG (2.5-0.2mm²).

Strip Length: 0.28" (7mm).

Torque, Terminal Hold-Down Screws: 4.5-7 in•lbs (0.50-0.78 N•m).

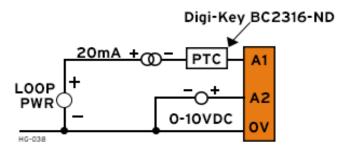

Built-In I/O

The I/O is mapped into OCS Register space, in three separate areas – Digital/Analog I/O, High-Speed Counter I/O, and High-speed Output I/O. Digital/Analog I/O location is fixed starting at 1, but the high-speed counter and high-speed output references may be mapped to any open register location.

Analog Input Transient-Voltage-Suppression Diode Failure

A common cause of Analog Input Transient-Voltage-Suppression Diode Failure on Analog Inputs Model 2, 3, 4 & 5: If a 4-20mA circuit is initially wired with loop power, but without a load, the analog input could see 24VDC. This is higher than the rating of the Transient-Voltage-Suppression Diode. This can be solved by NOT connecting loop power prior to load connection, or by installing a low-cost PTC in series between the load and analog input.

DIP Switches

The DIP switches are used to provide a built-in termination to the MJ2 port if needed. The termination for these ports should only be used if this device is located at either end of the multidrop/daisy-chained RS-485 network.

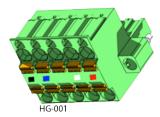

Ethernet

Green LED indicates link - when illuminated, data communication is available. **Yellow LED indicates activity** - when flashing, data is in transmission.

- Solid/Stranded Wire: 12-24 AWG (2.5-0.2mm²).
- Strip Length: 0.28" (7mm).
- Locking spring-clamp, two-terminators per conductor.
- Torque, Terminal Hold-Down Screws: 4.5 7 in•lbs (0.50 0.78 N•m).
- V+ pin is not internally connected, the SHLD pin is connected to Earth ground via a $1M\Omega$ resistor and 10 nF capacitor.

DIMENSIONS & INSTALLATION

Canvas 4 Dimensions

HG-525

* ± 0.1mm cutout tolerance

Installation Information

- The Canvas 4 utilizes a clip installation method to ensure a robust and watertight seal to the enclosure. Please follow the steps below for the proper installation and operation of the unit.
- This equipment is suitable for Class I, Division 2, Groups A, B, C and D or non-hazardous locations only.
- Digital outputs shall be supplied from the same source as the operator control station.
- Jumpers on connector JP1 shall not be removed or replaced while the circuit is live unless the area is known to be free of ignitable concentrations of flammable gases or vapors.
- The USB ports are for operational maintenance only. Do not leave permanently connected unless area is known to be non-hazardous.

Installation Procedure

- 1. Carefully locate an appropriate place to mount the OCS. Be sure to leave enough room at the top of the unit for insertion and removal of the microSD™ card.
- 2. Carefully cut the host panel per the diagram, creating a 92mm x 92mm ±0.1mm opening into which the OCS may be installed. If the opening is too large, water may leak into the enclosure, potentially damaging the unit. If the opening is too small, the OCS may not fit through the hole without damage.
- 3. Remove any burrs and or sharp edges and ensure the panel is not warped in the cutting process.
- 4. Remove all Removable Terminals from the OCS. Insert the OCSthrough the panel cutout (from the front). The gasket must be between the host panel and the OCS.
- 5. Install and tighten the four mounting clips (provided in the box) until the gasket forms a tight seal.

NOTE: Max torque is 0.8 to 1.13 N•m (7 to 10 in•lbs).

6. Reinstall the I/O Removable Terminal Blocks. Connect communications cables to the serial port, USB ports, Ethernet port, and CAN port as required.

SAFETY & MAINTENANCE

Warnings

- 1. To avoid the risk of electric shock or burns, always connect the safety (or earth) ground before making any other connections.
- 2. To reduce the risk of fire, electrical shock, or physical injury, it is strongly recommended to fuse the voltage measurement inputs. Be sure to locate fuses as close to the source as possible.
- 3. Replace fuse with the same type and rating to provide protection against risk of fire and shock hazards.
- 4. In the event of repeated failure, do **NOT** replace the fuse again as repeated failure indicates a defective condition that will **NOT** clear by replacing the fuse.
- 5. Only qualified electrical personnel familiar with the construction and operation of this equipment and the hazards involved should install, adjust, operate, or service this equipment.
- 6. Read and understand this manual and other applicable manuals in their entirety before proceeding. Failure to observe this precaution could result in severe bodily injury or loss of life.
- 7. **WARNING:** Battery may explode if mistreated. Do not recharge, disassemble, or dispose of in fire.
- 8. **WARNING:** EXPLOSION HAZARD- Batteries must only be changed in an area known to be non-hazardous.
- 9. **WARNING:** Do not disconnect while circuit is live unless area is know to be non-hazardous.

FCC Compliance

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1. This device may not cause harmful interference.
- 2. This device must accept any interference received, including interference that may cause undesired operation.

Precautions

All applicable codes and standards need to be followed in the installation of this product. Adhere to the following safety precautions whenever any type of connection is made to the module:

- 1. Connect the safety (earth) ground on the power connector first before making any other connections.
- 2. When connecting to the electric circuits or pulse-initiating equipment, open their related breakers.
- 3. Do NOT make connection to live power lines.
- 4. Make connections to the module first; then connect to the circuit to be monitored.
- 5. Route power wires in a safe manner in accordance with good practice and local codes.
- 6. Wear proper personal protective equipment including safety glasses and insulated gloves when making connections to power circuits.
- 7. Ensure hands, shoes, and floor are dry before making any connection to a power line.
- 8. Make sure the unit is turned OFF before making connections to terminals.
- 9. Make sure all circuits are de-energized before making connections.
- 10. Before each use, inspect all cables for breaks or cracks in the insulation. Replace immediately if defective.
- Use copper conductors in field wiring only, 60/75°C.

12. Use caution when connecting controllers to PCs via serial or USB. PCs, especially laptops, may use "floating power supplies" that are ungrounded. This could cause a damaging voltage potential between the laptop and controller. Ensure the controller and laptop are grounded for maximum protection. Consider using a USB isolator due to voltage potential differences as a preventative measure.
